

MongoDB Load Test Results Report

This report presents the performance metrics of our digital twin application using MongoDB as the database backend. The test was conducted using Locust, simulating 1000 concurrent users with a spawn rate of 10 users per second over a 1-minute period. The test focused on basic API operations to evaluate system responsiveness under load.

General Metrics

Metric	Value
Test Duration (seconds)	60
Total Requests	7434
Requests per Second	123.98
Success Rate (%)	99.97

Response Times

Response Time Metric	Value (ms)
Average	1299
95th Percentile	3000
99th Percentile	3200

Endpoint Details

Endpoint	Total Requests	Success Rate (%)	Avg Response (ms)	95 Response (ms)
/ping	7434	99.97	1299	3000
