

SQLite Load Test Results Report

This report presents the performance metrics of our digital twin application using SQLite as the database backend. The test was conducted using Locust, simulating 10 concurrent users with a spawn rate of 1 user per second over a 1-minute period. The test focused on basic API operations with minimal load to evaluate baseline system responsiveness. Note: Even with minimal load, SQLite showed significant connection handling issues, which is expected for a file-based database under concurrent access.

General Metrics

Metric	Value
Test Duration (seconds)	60
Total Requests	10
Requests per Second	0.26
Success Rate (%)	0

Response Times

Response Time Metric	Value (ms)
Average	30013
Median	30006
95th Percentile	30000
99th Percentile	30000
Maximum	30035

Endpoint Details

Endpoint	Total Requests	Success Rate (%)	Avg Response (ms)	Failures
/ping	10	0	30013	10
